MEDIA RELEASE

Threat Intelligence Transforms Security Automation Landscape with Launch of its new cloud platform Evolve

Comprehensive all-in-one security automation platform enhances security skills and capabilities; streamlines security operations and maximises existing security budgets from start-ups to major enterprise

BLACK HAT August 2018 – Threat Intelligence has announced the global launch of Evolve, a new cloud-based all-in-one security automation platform. Evolve is the first platform to deliver three pillars of comprehensive security automation across a unified platform – automated penetration testing, automated security infrastructure orchestration and automated incident response.

With Evolve, businesses and individuals can enhance current security skills and capabilities; streamline security operations and maximise existing security budgets, ensuring a better ROI. The innovative security automation platform is also revolutionising the consumption of security services with the choice of a subscription or on-demand usage-based business model.

"Evolve is an innovative security automation platform for businesses and individuals based anywhere in the world," said Ty Miller, managing director of Threat Intelligence. "It is designed to address the current gap in automated security offerings. By integrating an automated approach to penetration testing, security infrastructure orchestration and incident response we are able to deliver the broadest automated security platform offering in the market today."

He continued: "Evolve also has a unique capability to orchestrate whole environments on the fly, making it easier to respond to rapidly evolving security needs. Our goal is to make automating security requirements easy."

The Evolve security automation platform has been launched to meet an increased demand for a rapid response to increasing security visibility and capabilities in a more efficient operational and cost-effective manner. It meets these needs via its highly transparent platform capable of dissolving threats across one interface.

Evolve Platform

- **Greater on-demand coverage** - Execute on-demand automated penetration testing to identify key attack vectors and security flaws faster than ever before. Location-Agnostic Penetration Testing now allows penetration testing environments to be orchestrated in the cloud or across security zones. Evolve delivers better quality penetration testing and repeatable real-time verification of risks. Organisations can minimise the time it takes to detect critical risks and security weaknesses. This is achieved through Automated Reconnaissance, Automated Infrastructure Penetration Testing and Automated DevOps Application Security Testing.

- **Immediate proactive protection** - Evolve Security Automation makes it easy for organisations and security teams to orchestrate a wide range of security infrastructure components and automate the integration of Cyber Threat Intelligence feeds in for immediate proactive protection. Using the Evolve "Location-Agnostic Orchestration" capabilities, these security infrastructure components can be orchestrated within the Evolve Cloud or across any security zone in your organisation or third-party cloud provider.
- **Transformational incident response** – Evolve enables automatic evidence collection, analysis and response to security incidents to ensure that threats are dissolved, and breaches are contained. Responses are customized for each organizations' needs.

"Evolve was developed to directly respond to evolving global threats and the challenges of limited security budgets, skills and resources. We acknowledge many organizations would love to be able to better proactively respond to security challenges, rather than constantly managing security issues. Evolve let's them do this and can scale up or down to meet their needs at different times," concluded Miller.

Threat Intelligence executives will be attending Black Hat USA 2018 (Booth #1256) to brief media, analysts and prospective customers on the launch of Evolve. Threat Intelligence trainers will be conducting The Security Automation Lab for the first time during August 4-5, 6-7, 2018, and running The Shellcode Lab during August 4-5, 6-7, 2018 for the eighth consecutive year at Black Hat. Evolve is commercially available now.

About Threat Intelligence
Threat Intelligence is a specialist consultancy defining the next era of security, intelligence and security automation. It was established in response to the new challenges of an ever-evolving global threat environment. Services include security automation design, penetration testing, security training, agile security, forensic investigations and security architecture services. Its founder, Ty Miller, is one of Australia's leading information security specialists and is a prolific commentator and author on intelligence-based security. **www.threatintelligence.com**

About Black Hat

For more than 20 years, Black Hat has provided attendees with the very latest in information security research, development, and trends. These high-profile global events and trainings are driven by the needs of the security community, striving to bring together the best minds in the industry. Black Hat inspires professionals at all career levels, encouraging growth and collaboration among academia, world-class researchers, and leaders in the public and private sectors. Black Hat Briefings and Trainings are held annually in the United States, Europe and Asia. More information is available at: blackhat.com. Black Hat is organized by UBM, which in June 2018 combined with Informa PLC to become a leading B2B information services group and the largest B2B Events organizer in the world.
